ApplyReady AI — Internship Intelligence & Readiness Report

Assessment ID: app_1791741160912_6e6f310f · Generated: 11 October 2026 at 11:22 pm

Executive Summary

Role Alignment: 0% — Skill Gaps Identified

Candidate matched **0 of 1** required qualification(s) (0%) against the Job Description.

SKILL GAPS IDENTIFIED

GitHub Proof-of-Skill:
Not run (no repository URL provided)

Document Integrity:
Clean technical PDF structure

CV Optimization:
Initial baseline analysis

Opportunity & Target Profile

Category	Internship Intelligence
Opportunity / Role	Software Engineering Intern — Backend & Distributed Systems
Official URL / Listing	https://careers.google.com/jobs/results/internship

Role Alignment & Dimensional Index

Overall Technical Alignment Index	**0%** SKILL GAPS IDENTIFIED
Required Skills Coverage (70% Weight)	**0 / 1 (0%)** → Contribution: **0 pts** Measures presence of mandatory job qualifications in CV or repository.
Experience Evidence Grounding (30% Weight)	**0 / 1 (0%)** → Contribution: **0 pts** Measures proportion of matched skills supported by active project context or verified in repository code.
Preferred Skills Coverage (15% Weight)	**0 / 1 (100%)** → Contribution: **0 pts** Measures presence of bonus or preferred technologies.
Missing Mandatory Qualifications	microservices

Calculation Formula & Diagnostic Methodology:

```
Formula: Index = 70% Required Skills Coverage + 30% Experience Evidence Grounding
```

The Technical Alignment Index measures qualification overlap and contextual evidence grounding. It is an objective diagnostic tool for applicant preparation, not a hiring decision or recruitment guarantee.

Skills Matrix & Evidence Grounding

1. Verified by Repository (Manifest / Code Inspection) — 0	
No repository verification run, or no skills detected in repository manifests.	
2. Supported by Project Evidence (Active CV Bullet Context) — 0	
No skills currently substantiated with active CV project context.	
3. Mentioned Only (Skills Summary / Keyword List) — 0	
No skills in this category.	
4. Missing Qualifications (Required or Preferred in JD) — 1	
microservices (Mandatory)	✕ MISSING FROM CV

5-Tier Hierarchy Definitions:

- *Verified by Repository:* Code/manifest evidence confirmed via automated GitHub inspection.
- *Supported by Project Evidence:* Active engineering action verbs and descriptive project context in CV text.
- *Mentioned:* Listed in skills summary or keyword list without implementation context.
- *Missing:* Required or preferred in JD, but absent from application packet.
- *Unable to Assess:* Technical evaluation could not be completed.

Proof-of-Skill Verification (GitHub)

Verification Status	NOT RUN
Inspection Finding	No public GitHub repository URL was provided for this application. Automated code inspection was **Not Run**; no repository claims or code files are verified.
Next Step	Candidate may provide a public repository link to enable automated Proof-of-Skill manifest and language verification.

CV Improvement Lab — Accepted Revisions

1 accepted revision(s) prepared with active engineering delivery verbs. Integrity guaranteed: zero fabricated metrics.

#1 Target: microservices

ACCEPTED REVISION

Suggested Revision: "Completed academic coursework and lab assignments in Microservices, applying foundational syntax, standard libraries, and structured problem-solving."

Original snippet: "*Skill not detected in CV: Microservices*"

Reason: Required in the Job Description, but not currently substantiated in your CV text.

💡 Metric Advisory: Truth-in-advertising principle: Only incorporate this bullet if you have completed actual academic or personal coursework in this technology. Never claim unearned professional experience.

Prioritized Next Steps & Action Plan

1. Address Missing Mandatory Qualifications (High Priority)

The Job Description explicitly requires **microservices**. If you have completed coursework, personal projects, or lab exercises in these technologies, add truthful project bullets describing your implementation before applying.

2. Integrate Accepted CV Bullets into Master Resume (High Priority)

You have accepted **1 enhanced bullet revision(s)** in the CV Improvement Lab. Incorporate these bullets into your resume document to replace passive wording with clear, active engineering delivery verbs.

3. Provide a Public GitHub Repository for Proof-of-Skill (Medium Priority)

Automated Proof-of-Skill verification was **NOT RUN** because no repository URL was provided. Providing a public GitHub repository allows automated inspection of your dependencies and code structure to verify your technical skills.

4. Quantify Measured Benchmarks (Truthful Metric Guidance)

If you have personally measured performance benchmarks (e.g. API latency reduction, query throughput, test coverage percentage, dataset size), incorporate those exact figures. Never invent unverified percentages or metrics.

Document Integrity & Structural Analysis

1. Observed Technical Facts	
Document Structure Status	NO FORMATTING ANOMALIES DETECTED
Document Producer / Tool	Not specified by authoring software
Creator Application	Not specified by authoring software
Creation Timestamp	Not specified
Modification Timestamp	Not specified
Page Count	1 page(s)
Distinct Font Families	1 family

2. Technical Structural Checks Performed	
Creation vs Modification Chronology	UNAVAILABLE Chronology check unavailable: timestamps not populated by PDF authoring software.
Post-Export Editor Signatures	PASS Producer: 'Unspecified', Creator: 'Unspecified'.
Embedded Font Variety Check	PASS 1 distinct font families detected across 1 page(s).
Microscopic Text Layer Inspection	PASS 0 fragment(s) below 2pt font size found.
Selectable Text vs Scanned Raster	PASS Document contains native selectable text across 1 page(s).

3. Formatting & ATS Review Signals

✓ No formatting or ATS anomalies detected. Clean technical structure.

Technical Limitations & ATS Context:

- PDF metadata is routinely stripped or modified by legitimate online converters, virtual printers, and export utilities.
- Font count variations are standard in modern CV templates utilizing font icons, section headers, and stylized callouts.
- Integrity findings are automated formatting and ATS compatibility observations; they do not constitute proof of misrepresentation or tampering.

Assessment Limitations

- This tool extracts fields using rule-based patterns. Values not matching a known label format will not be detected.
- Scanned or image-based PDFs cannot be automatically extracted.
- This report is based only on the documents uploaded at the time of assessment.
- This assessment does not guarantee scholarship selection or internship placement.
- Verify all findings against official opportunity documents before submitting your application.
